

# HEALTHIFY WHITEPAPER

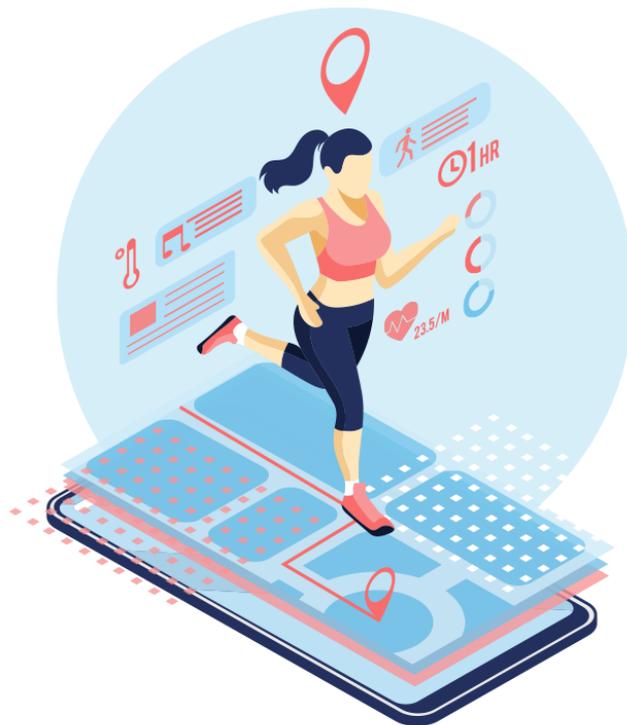

# World's First Health Metaverse & NFT Store

## Introduction:

Healthify is a pioneering Binance Smart Chain (BSC) token that will let you face a variety of exciting capabilities and challenges. Online stores, virtual clubs, multiple tournaments between champions selected by the winning users. Training centers and many other exciting events. All activities are designed in such a way that in addition to entertainment, users can earn money.

Our team also develops an online based APP, All people use the application in any role. Sports coaches, doctors and nutrition consultants and even active large companies. You will be in touch with all people of the world who care about their health.

## Our Mission:

Our mission is to create a platform through blockchain technology in which the people of the world, far from their race, religion and ethnicity, come together for a worthwhile cause. We can all create a healthier and happier world by taking care of our health and improving our diet and exercise habits.

## Our Vision:

In the world of Healthify you will face a variety of exciting capabilities and challenges. Online stores, virtual clubs, multiple tournaments between champions selected by the winning users. Training centers and many other exciting events. All activities are designed in such a way that in addition to entertainment, users can earn money. as we pour that belief into a secure, fair, and high percentage of returns through our platform. Everyone has the same chance of gaining high returns. Simply by holding our tokens, each holder has the same possibility of gaining from staking the token.

## **Ecosystem:**

BSC (Binance Smart Contract)

BNB powers hundreds of projects running on the BSC. You can use it in DeFi, liquidity pools, DEX trading, or as a payment for NFT marketplaces. The BSC ecosystem is using Proof of Staked Authority (PoSA) consensus powered by validators and delegators.

Transaction Fees

BSC blockchains use BNB as gas for transaction fees, which is much less than Ethereum gas. This allows investors to invest without worrying about incurring fees.

Transaction Rate

Binance also handles around 100 transactions per second (TPS) compared to Ethereum, which is 15 transactions per second.

Growth Opportunity

We think that by developing projects on BSC (a much younger network), there will be lower gas fees and faster transactions per second than Ethereum. We would be able to grow and broaden our exposure to the cryptocurrency sector.

# Value your health:

Join the best and most up-to-date technology and improve your health and quality of life. All your needs with the highest quality and lowest cost and online in your hands. Explore the exciting world of Healthify universe, build your own club and earn money. Do you know a way to earn a good income and enjoy your time and most importantly to help improve your health and life?

Start using the Universe right now. Buy HTF token and take your destiny in your hand.

# Our ICO Roadmap:
